

Connected Cities

Connected Cities

Connected Cities is about sustainable mobility and spatial development. As EU-sponsored Interreg III C network it focuses on high quality public transport and transport development areas, aimed at improving mobility and quality of life in urban and rural areas. The network activities will continue until the end of 2007.

European network

Connected Cities brings together twenty-five partners throughout Europe. The partners in Connected Cities will share their experiences and insights through management and coordination, interregional showcase workshops, dissemination and communication, including through a guide to good practice.
